

FREYSSINET
SUSTAINABLE TECHNOLOGY

Strategically situated in the heart of Abdali district, The Boulevard adds a spark of contemporary living to the new downtown of Amman. By combining 30,000 sqm of avant-garde office spaces, 400 luxurious hotel serviced apartments, managed and operated by Arjaan Rotana, premium retail spaces and scenic rooftops, The Boulevard is envisaged to become Jordan's center of consumer concentration with its eclectic commercial and entertainment offerings, and a premier development in the Middle East on a wider spectrum. Built on a land area of 26,540 sqm, The Boulevard consists of 12 buildings, six on each side, bordering a unique central 370 meters-long pedestrian promenade. Surrounded by wide streets along its four fronts, The Boulevard is an island that

is completely integrated into its surroundings. With this vision, the key defining structures of the pedestrian promenade were designed on three "platforms" linked to each other by terraces, stairs, suspended bridges and esplanades corresponding to the gentle slope along the length of the site and to its urban context.

Freysinet scope was to design, supply and supervision of PT slabs with up area of approximate 188,000 m² and 1,280 Tons of mono strands.
