

Airport Interchange Road is part of newly constructed Airport Road Network serving as a connection with new Abu Dhabi Airport Terminal.

One of the bridges comprises of 51 recast girders acting as a main structural elements.

Freyssinet was appointed to assist during installation of PT girders and scope was to transfer load from hydraulic jacks on the bearings respecting accurate position and height of the girders.

The full activity on site was completed during 3 months working closely with main contractor and in respect to all HSE requirements.
