

Al Ghurair Mall is located in Al Rigga area in Dubai. It was requested to resurvey, rectify and install all the structural work for the new escalator.

Due to introducing new escalator at ground floor in the mall, the client requested to do all structural assessment, as built survey, new design survey and RC foundations for the escalator from Grid line K-0 vs 8-9.

Freyssinet has been asked to replace existing installed beam with new steel beam as per the approved design followed by removal of all supporting or lifting steel beams after escalator installation.
