

New park developed by Park & Resorts PJSC was urbanized on a way that wide range of road network along with several bridges are constructed to allow fluent traffic inside the park itself.

Freyssinet was approached and appointed to conduct lifting on several locations of Pedestrian Bridge 1 in order to allow Contractor installation and leveling of the new bearings.

Jacks with capacity 520t and 260t were used depending on lifting location and calculated loads.

The full activity on site was completed during period of 1 week respecting all project QHSE requirements.
