

As a part of project of rehabilitation of road network in Sharjah two bridges with critical condition were selected for repair works.

Repair work included design of offloading system using specially design steel tower in order to allow work on bridge piers strengthening.

Freyssinet was assigned as a main contractor to carry on rehabilitation works with the requirement of extension of service life of both bridges for the next 5 years.

The full activity on site was completed within 8 months with respecting all traffic management and other project QSE requirements.
