

FREYSSINET
SUSTAINABLE TECHNOLOGY

Mirdiff Interchange represents infrastructure development, constructed to enhance traffic congestion on the road connecting Dubai Mirdiff area with Al Muhaisnah. After completion, several issues with pot bearings have been identified and bearing rectification works was required.

In the handover stage of the project, Freysinet was appointed by contractor to perform pot bearing replacement activity followed by: initial inspection, design verification, equipment selection and bridge jacking works.

The full activity on site was completed during weekend, without any interruption of the traffic, respecting project QSE requirements.
